

## **“Fire Stop Saves Lives”**

### **FIRE STOP AND LIFE SAFETY**

Commercial buildings and hospitals depend heavily on fire stop. Fire stop prevents the spread of fire and smoke from the source to other areas of the building. Local 135 has fire stopped a majority of the buildings in southern Nevada. Fire stop is a great way to protect a building and human life. In restaurants the grease in exhaust ducts is a major fire hazard. Insulation is used on ducts to contain fire within the duct. With fire codes changing it is important to constantly upkeep fire stop to insure compliance and to be safe.

**SAVING MONEY, SAVING LIVES**

**SAVING THE PLANET**

## Training, the key to success

Las Vegas Heat and Frost Insulators and Allied Workers have one of the most technical training centers in North America. It consists of a large workshop where application practices are taught for industrial and commercial insulation applications, along with a classroom for going over the math and properties of the insulation used in the industry. Our teaching staff is dedicated to teaching the most current skills in the trade. The fire stop training center is one of a kind, training in spec and blue print reading, system identification and application of all fire stop manufactures products.

Construction is a dangerous occupation and safety is one of Local 135's top priorities. We have an extensive safety training program including OSHA 10 and OSHA 30 training.

## INSULATION THE INVISIBLE RESOURCE

With the invention of steam energy in the late 1800s, insulation has been used to conserve energy. In 1901 insulators organized and started a union, we have been conserving energy ever since. Local 135 has been conserving energy in Las Vegas Nevada since 1963. We have insulated every casino on the Las Vegas strip, along with most of the major power plants in southern Nevada. Insulation is an important part of the construction process in all buildings and plants because of the energy it conserves when applied properly. Local 135 has one of the most advanced training centers across the country, with a dedicated staff committed to teaching the most current processes and leading innovations pertaining to the trade. With the push for clean energy, insulation is the answer to many energy conservation problems, which in cooperation with the NIA we have proven can pay for itself very quickly. Insulation is an invisible resource and insulators are energy conservation specialist.
